Abstract

Trichobezoars is a rare condition which stands for the accumulations of foreign material specifically hair the gastrointestinal tract Underlying psychiatric disorders are common among patients diagnosed with bezoars. This condition is mostly associated with trichophagia. Trichotillomania might also be present Typically, this disorder is acquainted in adolescent female who complains of alopecia along with an upper abdominal mass which might cause gastric outlet obstruction. However, cases of Trichobezoars of different ages including even infants have been reported. In this case report, a case of an 18 years old female with gastric outlet obstruction is demonstrated.

Keywords: Keywords: Trichobezoars, psychiatric disorders, abdominal mass, case report.

Biography

I am a 5th year medical student at Mutah University. I have been working in research a year ago. I have published many case reports working with doctors from Al-Basheer Hospital. My exact interest is within the surgical field. Also I am working in many studies regarding the COVID-19 pandemic. Another projects that I am leading are quality assessment and audits at Al-Karak Hospital. Finally I am leading a hospital for many international Audits and research.
