Addiction Medicine: Síndrome Z e uso de substância patológica

The chemical dependency, is already considered by the World Health Organization and the American Association of Addiction Medicine. However, there are thousands of specialists who have never observed the real onset of the pathology.

Before all addictions, there is Syndrome Z, which is the chronic hypodopaminergic state, which brings restlessness, anxiety, associated with a family disease of attachment neuroadaptation, family synchrony, which produces a harmful pathological state, or subtle as a scheme automatically activated within the family.

The Z syndrome is a differential diagnosis for the autistic spectrum, attention deficit disorder, childhood obesity, adult diabetes, and even Alzheimer's.

ADDITION MEDICINE is a clinical stakehold with several medical areas. It is the light at the end of the tunnel after 2022 years. It is not a hypothesis, idea, theory, but biological truth along with psychological, neurogenetic

Keywords: Síndrome Z, dopamina, addiction syndrome metabolic, diabetes mellitus, obesity
