Catholic University of Valencia, Spain

Post-Extraction Implant Associated With Immediate Loading in the Esthetic Area: Keys to Success

Objective:

To establish key factors that lead to functional and esthetic success of treatment in short and long-term.

Methods:

We pretend to establish a standard action protocol with predictable outcomes, in techniques of immediate post-extraction implants associated with immediate loading and regenerative techniques. So it has been compared the results of "Gerclar Implantologia" team's clinical outcomes, more than 15 years and more than 10000 implants of experience, with a systematic review of literature of randomized control studies from MEDLINE (PubMed) and Cochrane, from the last 10 years.

This way it has been possible to extract relevant factors that lead treatment to be successful in long-term period in a high percentage of cases.

Results:

It has been possible to establish an action protocol that allows the patients to enjoy fixed teeth the same day of the surgery and obtain esthetic and functional outcomes in long-term.

Conclusions:

Implantology is strictly linked with the evolution of dentistry. Nowadays, thanks to our effort, we established some easy to apply protocols, reproducible to any dentist and, especially, with very predictable outcomes.

Keywords: Dental implants, immediate loading, post-extraction sockets, esthetic outcomes.

Biography:

Dr Aurelio Nicastro, Italian born but Spanish adopted. Degree in Dentistry 2015 at Universidad Europea. Since he started practice dentistry by his own he was really attracted by the world of surgery and oral rehabilitation. For this reason he studied 3 post graduate masters University programme, respectively in Prosthetic, Surgery and Parodontology. Right now he's also attending the master of Parodontology, Osteointegration and Periimplantology @ Universidad Católica de Valencia. He practices as periodontist freelance with his team Gerclar Implantology, giving surgery service to many clinics in Spain.
