### Abstract

Breast cancer in male gender is rare with an incidence of 1 % of all breast cancers. There are many theories and risk factors that play a role in the development of breast cancer among males. The development of a second primary cancer is also rare. Herein we have a case of a male breast cancer that devolved after a 20 years of treated testicular cancer. There are many riskfactors that should be studied to know correlation between the two diseases. In this case report we will show the presentation of the patient, discuss the risk factors and put our treatment plan

**Conclusion:** Providing an education program focusing on the core measures provides an advantage to our patients as well as keeping the health care facility in compliance with stroke management protocols.

**Keywords:** Keywords: breast cancer, testicular cancer, mass, lump, case report.

### Biography

I am a 5th year medical student at Mutah University. I have been working in research a year ago. I have published many case reports working with doctors from Al-Basheer Hospital. My exact interest is within the surgical field. Also I am working in many studies regarding the COVID-19 pandemic. Another projects that I am leading are quality assessment and audits at Al-Karak Hospital. Finally I am leading a hospital for many international Audits and research.
