

3RD INTERNATIONAL CONFERENCE ON AI ML, DATA SCIENCE AND ROBOTICS

JUNE 26-27, 2023 | Mercure Roma West, Rome, Italy

Prof. Massimo Buonomo

IEC (International Electrotechnical Commission), Geneva, Switzerland

Exploring the Synergy: Generative AI and Venture Capital in Driving Innovation and Growth

Generative AI and venture capital are two distinct domains that have shown significant impact in their respective fields. Generative AI refers to the application of artificial intelligence techniques to generate new and innovative content, such as images, music, or text, that is not directly copied from existing examples. Venture capital, on the other hand, involves providing financial investment and support to startups and high-growth companies with the aim of generating substantial returns.

The intersection of generative AI and venture capital presents unique opportunities and challenges. Generative AI technologies have the potential to revolutionize various industries by enabling the creation of novel and creative outputs. This opens up new possibilities for startups to leverage generative AI in their products or services, attracting the attention of venture capital firms seeking to invest in cutting-edge technologies.

Venture capital firms, in turn, play a crucial role in fueling the growth of startups working on generative AI. They provide not only financial resources but also mentorship, industry connections, and strategic guidance to help these companies navigate the complex landscape of technology development, intellectual property, and market adoption.

However, investing in generative AI startups comes with its own set of challenges. The intellectual property landscape surrounding generative AI can also be complex, requiring careful evaluation of patent portfolios and potential legal risks.

In conclusion, the convergence of generative AI and venture capital represents an exciting frontier in technology innovation and investment. The symbiotic relationship between these domains has the potential to unlock new opportunities, disrupt traditional industries, and shape the future of AI-driven creativity and entrepreneurship.

Keywords: Generative AI, Venture Capital, Technology Innovation Investment

Biography:

Prof. Massimo Buonomo is a highly regarded professional in the Artificial Intelligence and blockchain field. Massimo is a former UN Global Expert in Artificial Intelligence Metaverse, blockchain.

Massimo is an International AI Expert - Ethics in Autonomous and Artificial Intelligence Applications at the IEC (International Electrotechnical Commission), a specialized think-tank on Ethics in AI.

Massimo is a board advisor and consultant for international organizations, start-ups, central banks, and corporates.

After working in international financial markets for 20 years, Massimo worked as an international finance university professor in Rio de Janeiro, Brazil, Turin, Italy, and Wuhan, China.
