

INTERNATIONAL CONFERENCE ON NEUROSCIENCE AND MENTAL DISORDER

JUNE 29-30, 2023 | (Mercure Roma West Rome, Italy)

Mr. Mohammad Hanoun

Neuroscience Institute, Hamad General Hospital, HMC, Doha, Qatar

Neuroschistosomiasis, radiological perspective

I will talk about neuroschistosomiasis from radiological perspective. Schistosomiasis is a common disease world wide and cosidered as the second cause of parasitic infection in humans world wide. Although it is not endemic in Qatar, we start to notice a number of cases presenting to A & E with this disease mainly from immigrants and travellers. In my presentation I will talk about the epidemiology, pathology and clinical manifestation of the disease briefly. Then I will focus on the radiological features using three cases from our practice in HMC (two brain and one spinal cord cases). In this presentation I will suggest a radiological sign to help diagnosis.

Biography:

Mohammad Hanoun is an Italy Consultant Neuroradiologist in Neuroscience Institute in HMC. He completed Arab board residency program in Hamad Medical Corporation, state of Qatar in 2013, and awarded Arab Board in Clinical Imaging. In the same year he was awarded the Jordanian Board in radiology. He completed Fellow ship in Neuroradiology in the same institute in 2015. He published in a number of papers and participated in research work. He likes chess and football.
